Maximum Coverage Scenario#

Up to 60 Layout Combinations* to Suit Your Living Environment

XDECT R
EXTENDED DIGITAL SERIES

Uniden's XDECT R Series Digital Cordless Phones offer Long Range and Outstanding Coverage by utilising a:

- Repeater Station built into each additional handset charging base, allowing you to extend the range and coverage from the main base by daisy chaining the signal to each additional repeater station.
- Diversity Antenna System for Optimal Reception and Clarity – by mitigating multi-path errors.
- High Gain Antenna for greater range and to eliminate drop areas in your home.

Uniden®

Uniden Australia Pty Limited
345 Princes Highway
Rockdale NSW 2216
Australia

Uniden New Zealand Limited
150 Harris Road
East Tamaki, Manukau, 2013
New Zealand

These scenarios would require a 1 x XDECT R055 + 2 and an additional 4 x XDECT R005. Please note a maximum number of 6 repeater stations can be connected to the one base.

60 different layout combinations are possible when the main unit (XDECT R055) and 6 x Repeater Stations (XDECT R005) are positioned in a very broad three dimensional distribution pattern.

* Caller ID, Call Block and POP features work only if you subscribe to the service provided by your local telephone company. There is usually a fee for this service. Caller Type 2 service is currently not available in New Zealand.

◇ Uniden's No. 1 status has been confirmed by 3rd party analysts in 2003 to 2008 using company sales data from all major cordless phone companies.

XDECT R055+2

How Does the Repeater work?

Uniden's XDECT Repeater Series utilises Repeater Stations that communicate with the main phone base. Each time additional Repeater Stations are added to the system they act as transmission points so that the signal can be re-transmitted even further distances. Therefore the benefit is that the phone's talking range and coverage can be dramatically increased.

Maximum
Range Scenario
