This handheld scanner with full frequency display offers 100 programmable memory channels - 7 bands. Offering the new Ground Breaking Technology "Close Call RF Capture Technology" this scanner automatically "Listens" for any nearby or "close" transmissions and once they occur the scanner immediately tunes in to this frequency which is ideal for use at events or locations when the transmission is unknown.

Frequency ranges received are 25-88, 108-174 and 400-512 MHz. Chain searching allows seven different personal search bands and the ability to search up to all five chain locations at once. Priority scanning allows a designated priority channel to be monitored every two seconds.

The UBC73XLT also has Pre-Programmed service search which automatically detects analogue Police, Railroad, Air, Marine, UHF CB and AM CB channels. The UBC73XLT comes with some great accessories including a Scanner Frequency CD, Earpiece Microphone and Cigarette Lighter Charger.

Suggested Retail: $199.95
